Let's All Speak The Same Language...

The PVF marketplace (Pipe/ Valves/Fittings) uses a lot of specialized jargon and acronyms to describe materials, dimensions, conditions, standards, governing bodies, etc. There are a ton of terms to know, and some are downright confusing.

Deciphering and understanding this language are important steps toward system design, valve selection and trouble-free installations.

Learning industry jargon is an ongoing process. And when you learn something new, you make yourself more valuable to your customers. With this in mind, we explained just a few of these jargon terms in a webinar, just over two years ago. We found that we just scratched the surface of this topic, so we've reached

out to our own valve guru, Bob Rudman, Milwaukee Valve's Director of Marketing. Bob will take you through another short review of many of the terms that you might hear on a routine basis, and may not quite understand what they mean.

And this understanding can help eliminate or reduce confusion or application problems.

So join us on **Tuesday, May 21st** to identify and become familiar with more of these terms. The webinar will begin at 1:00 (CDT) and run for about 30 minutes, followed by a short Q&A session. A link to the registration page can be found at the [Milwaukee Valve](#) website today or by clicking [HERE](#). Registration is required for Live or On-Demand attendance. A link to the first Jargon webinar can be found [HERE](#), but that content is not required for the new webinar.
